Applied GenAI Automation | ServiceNow & Endpoint Support Tooling | Internal Tools

SUMMARY

Builder who ships practical internal tools at the intersection of customer-facing IT, endpoint support, ServiceNow workflow automation, GUI development, and applied GenAI. 7+ years at Walmart across Tech Spot support, device migration, and operations support. Strong at converting repeated support playbooks into simple React/Python/C#/PowerShell apps, local AI workflows, and clear documentation.

CORE SKILLS

Languages: Python, TypeScript, C#, C++, PowerShell, Batch

Frontend / UI: React 18, Tailwind CSS, Vite, shadcn/ui, WinUI 3, WinForms, WPF, HTMX, Streamlit

Backend / automation: Flask, FastAPI, Selenium WebDriver, REST APIs, WinRM, SQLite, n8n

Endpoint / enterprise: Windows 10/11, macOS, Linux, Active Directory, Microsoft 365, SCCM/CM, JAMF, AirWatch, ServiceNow, YubiKey/smartcard auth

AI / LLM: Local LLMs, Ollama, LM Studio, QLoRA/LoRA, PEFT, HuggingFace datasets, evaluation workflows, Copilot/Roo/Cline

SELECTED PROJECTS

AutoService (Walmart internal) - React, TypeScript, Tailwind, Vite, shadcn/ui, Flask, Python, Selenium, ServiceNow, Ollama

- Built an IT support automation platform that streamlines IMS-to-ServiceNow workflows: queue triage, incident creation, form fill, timer tracking, resolution notes, and closure.
- Added device discovery across CM Search, JAMF, and AirWatch, plus manual-entry paths for tickets that do not come from queue scraping.
- Integrated LLM-assisted resolution notes, smart dropdown selection, KB article suggestions, templates with variable substitution, and configurable local AI backends.
- Packaged one-command install/start scripts, desktop shortcut creation, .env configuration, and setup/API/template documentation.

SupportOps Workbench (Walmart internal) - Python, FastAPI, HTMX, PowerShell, WinRM, SSE, YubiKey/SA auth

- Built a local web console for endpoint support that puts trusted PowerShell diagnostics, fixes, app deploys, and remote machine actions behind safe UI buttons.
- Implemented hostname-driven WinRM execution, live SSE output, job history, cancel/re-run, quick-chain playbooks, and YubiKey/SA credential brokerage.
- Covered common support workflows: Windows Update, AD checks/unlocks, network resets, SFC/DISM, Teams/Outlook/print repairs, disk cleanup, BitLocker/cert inventory.

Local LLM Fine-Tuning Platform - Python, Streamlit, QLoRA/LoRA, PEFT, HuggingFace

- Built a guided local fine-tuning platform for 7B-13B LLMs on consumer GPUs using QLoRA, with CLI and Streamlit workflows for data prep, training, evaluation, and export.
- Added IT-support templates for ServiceNow tickets, KB articles, SOPs, runbooks, postmortems, change requests, customer communications, and ticket triage.
- Implemented multi-format ingestion/cleaning, HuggingFace dataset browsing, VRAM/training metrics, model comparison, hyperparameter optimization, and post-tuning test/rating workflows.

Code Puppy GUI (Walmart internal) - Python, FastAPI, local-first agent UI

- Built a private localhost web GUI for the Code Puppy AI coding-agent runtime, exposing chat, sessions/context, agents, models, memory, skills, MCP, tools, reports, and settings without requiring slash commands.
- Preserved CLI/runtime compatibility while adding visual status cards for tool calls/shell commands, transcript export, model configuration, secret masking, and risky-action confirmations.

AuraClean (public) - C#, .NET 8, WPF, MVVM, SQLite, Task Scheduler, Windows APIs

- Built a Windows 10/11 cleanup and optimization utility with junk scanning, startup management, storage analysis, duplicate/large file detection, privacy cleanup, install monitoring, file shredding, quarantine, and heuristic threat scanning.
- Used .NET 8, WPF, MVVM, SQLite, Task Scheduler, and native Windows APIs; packaged as a self-contained single-file executable.

EXPERIENCE

Walmart - APEX Tech Spot (End-User IT Support, Customer-Facing) | Jun 2023 - Present

- Resolve Windows/macOS device, application, access, and data-recovery issues in a customer-facing support environment; communicate fixes in clear language.
- Manage Active Directory and Microsoft 365 requests; perform endpoint diagnostics, repairs, migration support, and hardware/software troubleshooting.
- Build and document Python, PowerShell, React, and GUI tooling that standardizes Tech Spot support workflows and reduces terminal-only work.
- Created internal tools including AutoService for IMS/ServiceNow automation and Workbench for remote endpoint diagnostics, fixes, and app deployment.

Walmart - APEX-DLE (Software & Hardware Support) | Oct 2021 - Jun 2023

- Developed and implemented a C# GUI for an automated shipping tool used by operations.
- Modernized the Onsite Migration Tool (OMT) GUI, improving usability and feature coverage for device migration workflows.
- Built the front end of an automated emailing platform for the company-wide device refresh program.
- Shipped targeted scripts and automation to unblock operations, support migrations, and reduce repeated manual work.
- Supported Home Office associates with access issues, device replacements, migrations, and troubleshooting.

Walmart - Contact Center (Resolution Specialist III) | Feb 2018 - Oct 2021

- Handled 50+ daily calls across Customer Care, Facilities Maintenance, Fuel, Fraud, and Emergency Operations.
- Coordinated vendor dispatch and follow-through for scheduling, fuel stations, building controls, and facilities maintenance issues.

EDUCATION

Mississippi Gulf Community College - A.S. in Computer Science, 2015
